Art Unit: 2652

Claims 1-12 are now pending.

Election/Restrictions

1. Applicant's election without traverse of Group I, i.e., claims 1-12, in Paper No. 10 is acknowledged.

*It is noted that the non-elected claims have been canceled in response to the restriction/election request.

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 102

3. Claims 1-5, 7-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Albrecht et al (US 5,821,494). Albrecht et al discloses a "disk drive" (see FIG. 1), which includes a bonding pad on a magnetic head terminal 62 (FIG. 12B-12C) which includes a bonding substance 60 which is a conductive adhesive solder film polymer (see col. 11, lines 16-25).

4. Claims 1-5, 7-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Ainslie et al (US 4,761,699). As shown in FIGs. 4 & 5, a slider 16 is bonded to a suspension 40; each of which have bonding pads 41, 74, 60, 63 to facilitate proper electrical connection therebetween. The bonding substance includes solder 80, 84 and a conductive adhesion film 74, 76.

Claim Rejections - 35 USC § 103

5. Claims 6, 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Albrecht et al or Ainslie et al.

Albrecht et al or Ainslie et al are silent as to the dimensions, i.e., height and diameter, of the solder bump, however, Albrecht does teach the slider pads to be no larger than 120 um (see col. 11, lines 19-20) which size slider pad would presumably encompass a solder bump having a diameter equal to or approximate to that dimension. Taking this and the knowledge of a skilled artisan into consideration, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided solder bumps within the claimed dimensions to the respective teachings of Albrecht et al or Ainslie et al. The motivation would have been: lacking any unobvious or unexpected results, the particular solder bump height and diameter would have been provided through routine experimentation and optimization so as to optimize the electrical connection with minimal height usage, which would have been realized by a skilled artisan.

Response to Amendment

6. Applicant's arguments filed 8/13/02 have been fully considered but they are not persuasive. Applicant asserts that the prior art of record (Albrecht nor Ainslie) does not disclose a metal pad having a bonding substance as a surface finishing material.

The Examiner maintains that both of the prior arts cited include a metal pad, i.e., bonding pad, and a bonding substance, e.g., solder, as a surface finishing material.

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
